

IKA ROTAVISC SBS hi-vi II Complete

/// Data Sheet

The SBS (Steel Ball Bearing, Suspended) rotational viscometers extend a large part of the application spectrum of our IKA ROTAVISC device family.

Instead of a jewel bearing, these devices are equipped with a special ball bearing technology. They are characterized by their high robustness. Predestined for applications with very high sample throughput, frequent spindle changes, operation in harsher environments, or even frequently changeing device locations.

Whether simple or demanding viscosity measurements - with ROTAVISC you get fast and accurate results.

Easy to use

Intuitive menu navigation awaits you via the generous 4.3"" TFT display. A digital leveling also supports the correct setting of the starting condition. Recurring tasks are facilitated by the simple ramp function.

Highest measurement accuracy

The accuracy of the ROTAVISC rotary viscometers for Newtonian and non-Newtonian liquids is +/- 1 % of the measuring range. The reproducibility is +/- 0.2%.

Infinitely variable speed

With ROTAVISC you have a viscometer in which you can adjust the speed stepless, but also specify programs or individual speed levels.

Viscosity-Measuring range: 800 - 320.000.000 mPas
